PRACTISCALE
BUILT FOR GROWTH

COMPLETE FILE HANDBOOK / EDITION 1.4

One identity.
Open design choices.

All 18 requested files, synchronized and checked.
Colors, type, logo, and CTA rules are established.
Website layouts will be selected later.

19 OCTOBER 2026 / MARKDOWN + CSS + JSON / SOURCES INCLUDED

Contents and file coverage

Every requested file is included in full. Retired chapters appear as notices. CSS and JSON are reproduced as readable source listings; wrapped lines do not change the ZIP originals.

Verification before export

Source preflight

21 checks passed before generating this PDF. All 18 requested paths exist and changed. Exact JSON/generated CSS parity, internal links, local assets, font resources, legacy-rule removal, semantic text contrast, CTA gradients, and boundaries were checked.

Local component fixture

42 checks passed in Chrome 155.0.8059.84. Nine font weights load. Default, hover, pressed, focus, disabled, theme consistency, logo sizing, wrapped labels, five viewport widths, reduced motion, and forced colors were exercised. No external requests or JavaScript errors were recorded.

Preserved source artwork

The original supplied PNG logo files are reused byte-for-byte. They differ slightly from earlier PDF extraction copies; no artwork has been redrawn or recolored. Full-logo source is 363 x 67px; original vector master remains outstanding.

Scope of this handbook

Markdown is typeset with its headings, tables, and examples. Complete tokens.json, tokens.css, components.css, fonts.css, and the optional CSS bundle appear in the source appendices. The ZIP contains exact editable files, assets, tools, and evidence.

Pending decisions and limits

Final website layout, photography, verified company facts, role terms, destinations, and native-speaker Urdu approval remain separate inputs. Component checks do not certify a later-selected website, assistive-technology behavior, company claim, or print proof. After export, every page must be rendered and visually reviewed; final results are supplied in the ZIP verification report.

README.md

PractiScale design system / Edition 1.4

Read 00-read-first.md first. Website designs and layouts are not final. Apply fixed brand rules to the design later selected by the user. The examples and component fixture do not approve composition.

Brand at a glance

Element	Current rule
Essence	Earned growth.
Brand line	Built for your growth.
Voice	Direct, empowering, transparent, precise
Primary environment	Deep Teal #134143
Visual balance	Overall 60/30/10 emphasis; no section or pixel quota
Primary CTA	Same #0F8272 to #0B6B98 gradient and White label on every theme
Font roles	Sora headings; Manrope reading/controls; JetBrains Mono data/overlines; Noto Nastaliq Urdu for Urdu
Logo	Original artwork unchanged; correct variant, size, and clear space
Layout status	Pending user selection

Files

- Brand essence, Brand story, Voice and tone.

- Logo, Color, Typography, Imagery and icons.

- Retired experience notice, Layout and interface, Retired applications notice.

- Sources, Changelog, Migration.

- Button, Logo component.

- Canonical tokens, generated token CSS, component CSS, local fonts, optional CSS bundle.

Use and validate

1. Select a layout or label a new concept as a proposal.

2. Read the fixed rules and use the exact semantic tokens.

3. Load components/bundle.css, or fonts.css, tokens.css, and components.css in order.

4. Use data-theme="deep-teal" or data-theme="fog". See migration notes before replacing older consumers.

5. After changing tokens.json, run `python tools/build_tokens.py`.

6. Run `python tools/verify_sources.py` before rendering the handbook. It checks all supplied paths, token/CSS parity, links, variable references, source artwork, fonts, prohibited obsolete rules, and numerical contrast.

7. Run the browser component fixture checks using tools/browser_check.cjs with Playwright and local Chrome. The fixture is an illustration, not a website layout.

8. Generate the handbook only after source and browser checks pass. Render every PDF page and inspect it before delivery.

Scope and dependencies

The updated copies preserve the 18 requested filenames. Two obsolete chapter paths now contain retirement notices. The ZIP includes original approved raster logos, local fonts and licenses, generator/verification tools, current evidence, and a consolidated handbook containing all requested file contents.

Original vector logo master, consented photography, verified company facts/destinations, final layout selection, and native-speaker Urdu approval remain separate production inputs. This is an RGB screen system; print needs an ICC-managed proof. Verification of these files does not validate a future live website.

00-read-first.md

Read first: fixed identity, open layouts

Edition 1.4 / 19 October 2026. This is the implementation companion to the revised PractiScale brand book.

Website designs and layouts are not final. Apply this identity to the design later selected by the user. Every composition, component arrangement, and code specimen is illustrative unless the user explicitly selects it.

Decision authority

Status	Meaning	How to act
Fixed brand rule	Original logo, exact palette, semantic colors, font roles, primary CTA identity, strategy and voice	Carry into every selected design. A current explicit user change can override an older guideline.
Adaptable default	Type-scale sizes, grid, gutters, spacing, non-CTA radii, breakpoints, timings	Adapt to actual content and the selected design while preserving readability and fixed component rules.
Illustration	Sample hero, cards, diagrams, component arrangement, test fixture	Demonstrates a rule; does not approve a page layout.
Pending design	Final structure, section order, navigation arrangement, crops, application flow and motion	Use the user's selected design. If no selection exists, label concepts as proposals.
Facts pending	Story placeholders, pay, roles, shifts, response times, proof and photographs	Publish only verified company information and consented real assets.

Workflow for an AI agent

1. Read the current brief and selected visual reference.

2. Use that reference for composition. Apply this system for PractiScale identity.

3. Map Sora to headings, Manrope to reading and controls, JetBrains Mono to data and overlines, and Noto Nastaliq Urdu to Urdu.

4. Use exact semantic colors from `tokens.json`. Generate CSS with `python tools/build_tokens.py`.

5. Adapt layout defaults; retain mobile paragraphs at least 16px, readable line spacing, and the fixed CTA specifications.

6. Check the actual foreground/background pairs, every button state, logo at actual size, mobile wrapping, zoom, keyboard focus, imagery overlays, and reduced motion.

7. Report which choices are fixed, adapted, proposed, or awaiting evidence. A brand-compliant concept is not an approved layout.

A selected layout does not silently replace the logo, palette, fonts, or CTA. Document material departures requested by the user; clarify only ambiguous conflicts. Book cover geometry and stepped lines are editorial examples, not required website graphics.

Scope of evidence

Source validation and fixture tests establish consistency of these files and reusable components. They do not certify a later-selected website, assistive-technology behavior, print proof, or company claim. See verification/preflight.json `(verification/preflight.json)` and verification/component-checks.json `(verification/component-checks.json)`.

01-brand-essence.md

Brand essence

Status: fixed strategy. Layout and section order remain open.

Earned growth.

Growth at PractiScale is never given and never inherited.

The essence

It is built, skill by skill, on real work, and it shows up in the numbers. The logo already says Built for growth. On practiscale.pk we make it personal: Built for your growth.

Purpose

Talent is evenly spread. Opportunity is not. Thousands of capable people in Pakistan never get a shot at global work because hiring filters on degrees, connections and accents. We exist to close that gap with training, systems and real accounts.

Mission

Train ambitious people in Pakistan in skills the global market pays for, and put those skills to work on real US healthcare accounts.

Vision

Pakistan becomes the first place US healthcare looks for growth talent, and a PractiScale seat becomes the most respected first line on a Pakistani CV.

Five choices we make every day

Each value is a choice between two good things. We say which one wins.

Value	What it means	You see it when	It is not
Hunger over pedigree	We hire drive and coachability, not degrees or surnames.	A fresher with no sales background outperforms in month three because we trained them.	Ignoring experience. Experience is welcome; it just is not the entry ticket.
Outcomes over hours	We measure what moved, not how long you sat.	Pay and promotion are tied to output, and the targets are written down.	An always-on culture. Hitting the number on time is the point.

Value	What it means	You see it when	It is not
Systems over heroics	A playbook that works every time beats one person saving the day.	A new sales hire runs the same proven script on day one. Wins get written into the system.	Bureaucracy. Systems exist to make good work easy.
Ownership, always	You own your number, your mistakes and your growth.	People say "I missed it, here is the fix" before anyone asks.	Blame. Ownership is about the next move.
Proof over promises	We show real figures, real people, real process.	Every pay figure on the site is dated and attributable.	Oversharing private data. Proof is shared with consent.

What we offer

For ambitious talent in Pakistan, connected to real US healthcare work.

For talent in Pakistan

A skill the market pays for, a seat using it on live US accounts, and pay tied to what you deliver, with a written path to the next level.

For US healthcare clients

A trained, systematized team that runs referral partner outreach on your accounts and reports results you can check. The client-facing home is practiscale.com.

One connected promise

The two halves need each other: clients get results because the talent is trained; talent gets paid because the clients are real. Say both when the audience is mixed, including press and LinkedIn.

Positioning statement

For ambitious people in Pakistan who have been filtered out by credential-based hiring, PractiScale is the employer that trains you in a paid skill and puts you on real US healthcare accounts, because our business is measured on results every week, not on where you studied.

Four pillars, in order

Train: We teach the skill. Show curriculum, trainers, and time to first live call.
Place: You get a real seat. Show open roles, live accounts, and team photos.
Prove: Your results are visible. Show dated pay and performance figures, with consent.
Grow: There is a next level. Show a written career ladder and promotions from within.

If PractiScale were a person

The senior colleague who believed in you before anyone else did: sharp, demanding, generous with what they know, and allergic to excuses.

Trait	Shows up as	Never becomes
Builder	Talks in steps, systems, next moves	Cold engineer
Coach	Explains, encourages, sets the bar high	Preachy motivational speaker
Straight-talker	Says the number, the hours, the catch	Blunt for effect
Precise	Specific nouns, real figures, exact times	Jargon
Ambitious	Big about where you can go	Hype, "get rich"

Earned growth. Built for your growth. Hunger over pedigree, proven on real US accounts.

Pillars are a narrative framework

Train, Place, Prove, Grow remain the approved pillars. They do not require four website sections, a staircase graphic, or a particular page sequence. Examples of behavior express values; they are not independently verified performance claims.

02-brand-story.md

Brand story

Status: narrative framework; company facts pending. Bracketed text is working copy, not publishable fact.

The story spine

Preserved narrative framework. Founder and historical facts require company evidence before publication.

01 / The gap

Pakistan is full of capable, hungry people. Global work filters them out on paper.

02 / The bet

[Founder name] bet that skill could be taught and proven faster than a degree could be earned.

03 / The system

Instead of hoping for heroes, PractiScale built playbooks: train the skill, put it on a live US account, measure the result.

04 / The proof

People who were overlooked are now closing deals and running outreach for US healthcare practices. Publish only the results that can be evidenced, with a date and consent.

05 / The invitation

Your seat is next. Built for your growth.

Publication gate

Everything in square brackets is a fact only PractiScale can supply. These are working story templates, not verified history. Do not publish any version until every bracket and claim has been checked. Never invent a founding detail.

Origin narrative

Long-form working draft / About page, press kits, onboarding.

Draft / facts pending

In [year], [founder name] was [one concrete detail about what they were doing]. The work was real and the clients were real. The hard part was finding people to do it, not because the talent was not there, but because the usual filters kept missing it.

So PractiScale stopped filtering and started training. [Founder name] wrote down what worked on live accounts and turned it into a system anyone hungry enough could learn. The first [number] people learned it in [timeframe]. [First verified milestone.]

Draft / continued

Today PractiScale is a US healthcare growth company powered by a team in Pakistan: sales, virtual assistance, creative and technology people working on real US accounts from [cities] and from home. [Current verified proof point, with date and consent.]

The bet has not changed. Talent is everywhere. With the right training and a real seat, it shows up in the numbers. That is what we mean by built for growth. Yours, ours and our clients' growth.

Required evidence

Confirm the founder, year, origin detail, cohort size, timeframe, cities, working arrangements, milestone, and current proof point before release. No illustrative history has been substituted for missing facts.

The story, at two lengths

Working templates / preserve the voice and verify every factual statement.

Medium form

Use on the website story section, LinkedIn About, and recruiting decks.

PractiScale started in [year] with one bet: skill can be taught and proven faster than a degree can be earned. We train ambitious people in Pakistan in skills the market pays for, then put them on real US healthcare accounts: sales, virtual assistance, creative and tech. We measure outcomes, not hours, and we publish the proof. If you are hungry and coachable, there is a seat for you. Built for your growth.

Short form

Use in social bios, job-board blurbs, and email signatures.

We train ambitious people in Pakistan and put them to work on real US healthcare accounts. Hunger over pedigree. Built for your growth.

Storytelling rules

Tell it through people. Each campaign features a real team member's before and after, in their words, with consent.

Keep the founder a supporting character. The hero of the story is the person reading it.

Never frame Pakistan as a cost-saving location. Frame it as a talent source the world underrates.

Never claim things we cannot show: "best", "largest", "guaranteed income".

Numbers in the story carry a date. Specify the exact count and as-of date, rather than an unsupported "+ and growing" claim.

Milestones need evidence

Collect four to six verified milestones before publishing a company timeline.

Milestone	Company fact to supply	Evidence to retain
Founding	Year, city, founder name	Registration, dated records, founder confirmation
First US healthcare client	Date and permitted client description	Contract or approved client record
First training cohort	Date and verified cohort size	Training records and consented photographs
First office / office move	Date and real location	Dated lease or workplace photographs
Team milestone	Exact count and as-of date	Approved HR record; permission to publish
Most recent milestone	Specific achievement and date	Owner-approved primary evidence

No company history, team size, pay figure, testimonial, or performance result is established by this template. An internal evidence owner must approve each published claim.

03-voice-and-tone.md

Voice and tone

Status: fixed voice and writing rules. Examples are templates. Verify every role-specific claim before publication.

Four traits

Direct, empowering, transparent, precise.

We are	Never	Sounds like	Avoid
Direct	Cold	"The role pays [verified base] plus [verified commission]."	"A highly competitive remuneration package."
Empowering	Hype	"You will join a live account after the verified training period."	"Unlock your limitless potential!"
Transparent	Oversharing	"Shifts follow US hours. Here are the exact times."	"Flexible timings as per business needs."
Precise	Jargon	"Book [verified target] qualified calls a week."	"Drive top-of-funnel synergies."

Bracketed details are required inputs, not claims. The examples preserve the original voice without publishing unverified pay, timelines, or targets.

Tone by situation

Same voice, different tone. The reader's state decides.

Situation / state	Tone shift	Example
Website hero / curious, skeptical	Confident, short	Built for your growth.
Open role / hopeful, comparing	Specific, factual	State seat title, verified base, commission terms, and exact US-hours shift.
Application received / anxious	Reassuring, concrete	Got it. We will reply on WhatsApp within [confirmed response time].

Situation / state	Tone shift	Example
Assessment / nervous	Clear, supportive	This takes about [verified duration]. There is no trick question.
Rejection / disappointed	Respectful, useful	Not this time. Here is the one thing that would change our answer.
Offer / excited	Warm, exact	Welcome. Your seat, your pay, and your start date are below.
Social / scrolling	Bold, one idea	No degree on the wall. A deal on the board.
Client-facing / evaluating	Formal-leaning, results	A trained outreach team, reporting weekly.

Examples require role-specific confirmation before publication. Never imply a service level, income, or training guarantee that the company cannot support.

Words we choose

Plain words make the promise easier to understand.

Use	Avoid	Why
seat, role	vacancy, position	A seat is something you take and keep.
team	family	We are colleagues. "Family" excuses bad practice.
pay, base, commission	remuneration, package, CTC	Plain words.
train, coach	upskill, empower as a verb	Say what actually happens.
real US accounts	international exposure	Specific beats vague.
results, output	hustle, grind	We value outcomes, not exhaustion.
apply	submit your candidature	Plain words.
fresher	fresh graduate only	Freshers include people with no degree.
you, everyone	guys, candidates in headlines	Speak to one person, inclusively.

Banned: rockstar, ninja, guru, synergy, world-class, limitless, guaranteed income, work hard play hard.

Copy mechanics

Consistency makes details feel credible.

Language and case

Use US English spelling: program, color, organize. Use sentence case for headings, buttons, and labels. Uppercase is reserved for overlines.

Punctuation

No exclamation marks on the site. Use the Oxford comma. Use a clear dash for ranges; avoid ambiguous time or pay ranges.

Numbers and currency

Use numerals in UI and commas for thousands. Avoid lakh/crore notation outside Roman Urdu social posts. Write PKR [amount] in formal and on-site copy; Rs [amount] is acceptable in Roman Urdu social posts. Always state the pay period and commission conditions.

Times and dates

State the zone every time. Pakistan time first, US time in brackets. Verify the actual date and US daylight-saving status before publishing a conversion. Use 16 October 2026 in prose and 16 Oct 2026 in UI.

Names

Write PractiScale as one word, with capital P and S. The all-caps wordmark is artwork, not a spelling.

WhatsApp

Capital W and A; same font and size as surrounding text. Use it as a noun: Apply on WhatsApp. Do not imply that WhatsApp endorses PractiScale. Use only the official platform glyph.

Language and action

One verb, one destination, sentence case.

Languages

English: default for the website, documents, and LinkedIn.

Roman Urdu: conversational Instagram, TikTok, WhatsApp replies, and short video captions. Never website headlines.

Urdu script: local campaigns, office signage, and video titles. Use Noto Nastaliq Urdu, right-to-left. Every line needs a native-speaker check before publishing.

CTA vocabulary

Apply on WhatsApp: primary site CTA.
See open seats: secondary action or navigation label; placement follows the selected layout.
Email your CV: secondary email route.
Start the task: assessment step.
Book a call: practiscale.com only.
Never: Click here, Learn more, Submit, Join the family.

Rewrite for specificity

"Dynamic go-getters" becomes a clear seat title, training terms, and real account context.

"Competitive salary + perks" becomes a verified base, commission terms, and pay period.

"Freshers can also apply!!!" becomes "Freshers welcome. We will train you." Use this only for roles that include training.

"Interested candidates can WhatsApp at..." becomes "Apply on WhatsApp" with a confirmed destination.

Do not fill gaps with claims

A pay figure, training duration, hiring target, reply time, or availability statement needs approval from the team responsible for delivering it.

Tone dimensions

Spectrum	Default position (1 left / 5 right)	Interpretation
Formal / Casual	3	Professional and conversational
Serious / Funny	2	Warmth without jokes
Respectful / Irreverent	2	Respectful; critique habits, not people
Matter-of-fact / Enthusiastic	3	Facts first; energy in verbs

04-logo.md

Logo

Status: fixed artwork and protection rules. Logo position within a final layout remains open.

Anatomy and files

The supplied artwork contains the interlocking X, three speed lines, original teal-to-blue gradient, upward-arrow A, and BUILT FOR GROWTH descriptor. Never retype the wordmark or reconstruct a vector approximation as official artwork.

Asset	Background	Source limitation
`assets/logos/practiscale-logo-primary.png`	Fog, White, approved light surfaces	Full logo 363 x 67px
`assets/logos/practiscale-logo-reversed.png`	Deep Teal, approved dark surfaces, Harbor	Full logo 363 x 67px
`assets/logos/practiscale-mark.png`	Approved ground with sufficient separation	Mark 64 x 60px

Use the original supplied artwork. Obtain the designer's vector master and approved derivatives before larger production. Do not invent a no-descriptor, stacked, or monochrome version.

The darker blue part of the mark has less separation on Deep Teal and Harbor. Light grounds show the complete symbol more clearly. Inspect the symbol and descriptor at actual size; never recolor them to compensate.

Clear space and minimum size

Let X equal the cap height of the wordmark, approximately 7% of the full logo width.

Relative spacing

Keep at least 1X clear on every side of the full logo. Around the mark alone, keep clear space equal to half the mark's height. On spacious layouts, allow 2X to 3X. Never replace this proportional rule with a fixed pixel value.

Full logo with descriptor

Digital: at least 240px wide.
Print: at least 50mm wide.
Below 240px, use the mark alone. Use a no-descriptor version only after the original designer supplies an approved master.

Mark alone

Digital: at least 24px.
Print: at least 8mm.
For platform avatars, center with 20% padding; the platform supplies the circular crop.

Asset limitation

The full logo is 363 x 67px; the mark is 64 x 60px. Raster reuse preserves the original identity, but does not create a print-quality master. Request SVG, AI, or original vector PDF from the logo designer before large-format production.

Protect the original artwork

Misuse rules apply at every scale.

Never alter the form

Never stretch, squash, skew, rotate, or set the logo on a path. Never rearrange the mark and wordmark or change their size ratio. Never remove the upward-arrow A. Never retype the wordmark, including in Sora.

Never add effects

No shadows, glows, outlines, bevels, textures, or recoloring. Keep the interlocking X, three speed lines, original teal-to-blue gradient, wordmark, and descriptor intact. Do not animate the parts separately.

Never create a sub-brand

Do not combine the logo with another word to create "PractiScale Careers" or "PractiScale PK". Do not enclose it in a badge or container shape, except automatic avatar crops.

Approved backgrounds

Use primary black-wordmark artwork on Fog, White, or approved light surfaces; reversed artwork on Deep Teal or approved dark surfaces. The dark blue part of the symbol separates more clearly on light grounds. Assess the whole mark at actual size; never recolor it to compensate.

Avoid conflicting grounds

Never place the logo on Growth Teal, Proof Amber, the primary CTA gradient, or a busy photograph. On imagery, use a calm protected area and verify wordmark readability; a separate solid panel is preferred.

Co-branding

Client logos belong only in permitted practiscale.com case studies, with written permission: same optical wordmark height, a 1px divider, and 2X space. Official WhatsApp artwork must remain unmodified, smaller than our logo, and secondary in prominence.

05-color.md

Color

Status: fixed palette and semantic roles. Color balance guides emphasis; it does not approve a layout.

Official palette

Name	Exact sRGB	Role
Deep Teal	#134143	Primary environment
Growth Teal	#20BFA8	Controlled brand accent
Bridge Blue	#0D77A9	Secondary brand accent; accessible links on light grounds
Harbor	#2C526E	Supporting dark band
Fog	#F3F6F6	Light reading ground
White	#FFFFFF	Reading surfaces and reversed text
Proof Amber	#F5B041	Verified numerical achievements only

Use exact sRGB for screen output. CMYK and spot-color conversions require an ICC-managed proof on the actual stock; no unverified conversion is a print standard.

60 / 30 / 10

Deep Teal and its tonal surfaces provide about 60% of overall visual emphasis; Fog and White support about 30%; accents share about 10%. Approximate accent guidance is Growth Teal 7, Bridge Blue 2, Proof Amber up to 1. The CTA gradient is included in the accent allocation. Omit amber when there is no verified achievement. These are not exact pixel quotas, a per-screen split, or a mandatory section order.

Theme tokens

Role	Deep Teal theme	Fog theme
bg	#134143	#F3F6F6
surface	#1C5052	#FFFFFF
surface-2	#265F61	#E6ECEC
line	#3D7375	#CFD8DA
line-strong	#8BB6B6	#6F8287
text	#FFFFFF	#134143
text-muted	#BDD3D3	#46565B
accent-text	#9BE3D6	#0B6559
link	#A9D4EC	#0D77A9
link-raised	#A9D4EC	#0A6390
error	#FFFFFF	#134143
focus	#9BE3D6	#0D77A9

Necessary input/button boundaries use `line-strong`, not faint decorative `line`. On a raised Fog surface use `link-raised` #0A6390. Errors use high-contrast theme text, an explicit label, icon, and correction. Proof Amber is never a warning or error color.

Approved text contrast

Theme / role	Foreground	Background	Ratio
Deep Teal / Text	#FFFFFF	#134143	11.261:1
Deep Teal / Text	#FFFFFF	#1C5052	9.057:1
Deep Teal / Text	#FFFFFF	#265F61	7.262:1
Deep Teal / Muted	#BDD3D3	#134143	7.197:1
Deep Teal / Muted	#BDD3D3	#1C5052	5.789:1
Deep Teal / Muted	#BDD3D3	#265F61	4.641:1
Deep Teal / Accent text	#9BE3D6	#134143	7.696:1
Deep Teal / Accent text	#9BE3D6	#1C5052	6.190:1
Deep Teal / Accent text	#9BE3D6	#265F61	4.963:1
Deep Teal / Link	#A9D4EC	#134143	7.140:1
Deep Teal / Link	#A9D4EC	#1C5052	5.743:1
Deep Teal / Link	#A9D4EC	#265F61	4.604:1
Fog / Text	#134143	#F3F6F6	10.362:1
Fog / Text	#134143	#FFFFFF	11.261:1
Fog / Text	#134143	#E6ECEC	9.424:1
Fog / Muted	#46565B	#F3F6F6	7.046:1
Fog / Muted	#46565B	#FFFFFF	7.657:1

Theme / role	Foreground	Background	Ratio
Fog / Muted	#46565B	#E6ECEC	6.408:1
Fog / Accent text	#0B6559	#F3F6F6	6.399:1
Fog / Accent text	#0B6559	#FFFFFF	6.954:1
Fog / Accent text	#0B6559	#E6ECEC	5.819:1
Fog / Link	#0D77A9	#F3F6F6	4.570:1
Fog / Link	#0D77A9	#FFFFFF	4.966:1
Fog / Link	#0A6390	#E6ECEC	5.491:1

All 24 listed pairs pass 4.5:1 for ordinary text. Do not assume this approves another surface or reduced opacity. Qualifying large text requires 3:1; applicable UI boundaries require 3:1.

Primary CTA identity

State	Start	End	White label minimum / 1,001 samples
default	#0F8272	#0B6B98	4.708:1
hover	#0D7668	#095F87	5.508:1
pressed	#0B695D	#085477	6.570:1

Horizontal, left to right, encoded sRGB. Focus retains the default fill. Use the same primary gradient on all themes. White label, Manrope 700, at least 48px high, 10-12px corners. The 11px token is a default within that fixed range. Dark-theme boundary #D6E6E6.

Boundaries and forbidden pairings

Pairing	Ratio	Decision
Dark secondary border	3.273:1	Pass for its tested role
Light secondary border	3.367:1	Pass for its tested role
Dark focus	4.963:1	Pass for its tested role
Light focus	4.156:1	Pass for its tested role
CTA subtle border on raised dark	5.644:1	Pass for its tested role
CTA default edge without boundary	2.390:1	Add visible CTA boundary
CTA edge on Fog	4.336:1	Pass for its tested role
White on Growth Teal	2.313:1	Do not use for ordinary text; use semantic text token
Growth Teal text on raised dark	3.140:1	Do not use for ordinary text; use semantic text token
Bridge Blue text on raised dark	1.462:1	Do not use for ordinary text; use semantic text token
Dark disabled label	4.641:1	Pass for its tested role
Light disabled label	6.408:1	Pass for its tested role
White error text on raised dark	7.262:1	Pass for its tested role
Deep Teal error text on Fog	10.362:1	Pass for its tested role
White on Harbor	8.270:1	Pass for its tested role
Deep Teal on Proof Amber	5.989:1	Pass for its tested role

Gradient restriction

Only the unchanged logo and approved primary CTA use gradients. No gradient headings, backgrounds, cards, or decorative artwork.

Ramps and charts

Supporting teal/blue ramps do not approve every text pairing. Interfaces use semantic colors. Charts must identify series with labels and non-color cues; use visible boundaries where necessary. Amber in data remains limited to a verified achievement, not an arbitrary third series or warning.

Teal ramp

Token	Value
teal-50	#E8F8F5
teal-100	#CBF0E9
teal-200	#9BE3D6
teal-300	#5ED2BF
teal-400	#20BFA8
teal-500	#149C89
teal-600	#0E7F70
teal-700	#0B6559
teal-800	#0A4B43
teal-900	#08332E

Blue ramp

Token	Value
blue-50	#EAF4FA
blue-100	#CFE6F3
blue-200	#A3CDE6
blue-300	#6FB0D6
blue-400	#3A93C4
blue-500	#0D77A9
blue-600	#0A6390
blue-700	#0A4F74
blue-800	#083B57
blue-900	#062A3F

06-typography.md

Typography

Fixed: font families and assigned roles. **Adaptable defaults:** display sizes, line heights, and tracking, while preserving hierarchy and readability. The below-768px switch is a default, not a required responsive layout.

Families

Role	Family	Approved weights
Headings and display	Sora	600, 700
Body, buttons, interface	Manrope	400, 500, 700
Data, overlines, technical labels	JetBrains Mono	400, 500
Urdu script	Noto Nastaliq Urdu	400, 700

The supplied local fonts and SIL Open Font License texts are included. `fonts.css` declares the real files. Load it before the token and component styles. Fallbacks support loading; they are not permanent brand substitutions.

Default scale (CSS pixels)

Style	Family	Desktop size / line	Mobile size / line	Weight	Tracking	Role
display-xxl	Sora	96 / 96	48 / 52	600	-3.5%	Hero / once per page
display-xl	Sora	72 / 76	40 / 44	600	-3%	Major section titles
h1	Sora	56 / 60	36 / 40	600	-2.5%	Page titles
h2	Sora	40 / 48	28 / 34	600	-2%	Section titles
h3	Sora	28 / 36	22 / 28	600	-1%	Subsections
h4	Sora	20 / 28	18 / 26	600	0	Small headings
body-lg	Manrope	20 / 32	18 / 28	400	0	Ledes
body	Manrope	17 / 28	16 / 26	400	0	Reading text
body-sm	Manrope	15 / 24	15 / 24	400	0	Dense desktop info
label	Manrope	15 / 20	15 / 20	700	+1%	Buttons and labels
caption	Manrope	13 / 18	13 / 18	500	0	Credits and legal
overline	JetBrains Mono	12 / 16	12 / 16	500	+16%	Uppercase markers
data	JetBrains Mono	15 / 22	15 / 22	500	0	Tabular figures
spec	JetBrains Mono	12 / 18	12 / 18	400	0	Guideline notes
urdu-display	Noto Nastaliq Urdu	40 / 84	32 / 68	700	0	Urdu headlines
urdu-body	Noto Nastaliq Urdu	20 / 44	18 / 40	400	0	Urdu body

Readability constraints

- Mobile paragraph text stays at least 16px. Labels/captions are separate roles; never use them as a paragraph loophole.

- Use no weight below 400 for text under 32px. Aim for 60-75 characters per line where the viewport allows; narrower mobile lines are natural.

- Use sentence case and a clear heading hierarchy. A display headline is optional; use at most one dominant display headline per page.

- Prefer balanced headings and natural paragraph wrapping. Do not shrink copy to force a composition.

- Use live text over imagery. Check the actual crop and brightest relevant video frame: 4.5:1 ordinary text, 3:1 qualifying large text.

- Use tabular JetBrains Mono for aligned figures. Currency, time zones, dates, and factual details follow Voice and tone.

- Urdu uses `lang="ur" dir="rtl"`, generous line height, and native-speaker review. Do not mix Urdu and Latin in one headline.

Illustrative hierarchy

```
REAL WORK / REAL GROWTH            JetBrains Mono overline
Built for your growth.             Sora heading
Learn a skill the market pays for. Manrope supporting text
Apply on WhatsApp                  Manrope 700 button label
```

This example demonstrates roles, not a required hero design, copy sequence, or position.

Loading and fallback

Use font-display: swap. Request only needed weights; load Urdu only on relevant pages. Preload Sora 600 and Manrope 400 when used above the fold. Match fallback metrics to reduce layout shift. For office documents where brand fonts cannot be installed: Sora if available, otherwise Arial Bold for headings and Arial for body. No near-lookalike substitution as the permanent identity.

07-imagery-and-iconography.md

Imagery and iconography

Fixed principles: authentic people, consent, privacy, clear overlays, consistent icons. **Open:** final crops, image placement, visual compositions, and website-specific video treatment. No rendered glass-module graphic system is required.

Photography standards

Credibility comes from authentic detail.

Light and grade

Use natural or practical light. Evening interiors and screen glow can show the US-hours reality. Keep true skin tones and clean highlights. Shadows may lean gently toward Deep Teal. No heavy teal-orange grade.

Framing and subject

Eye level, close to mid shots, shallow depth of field. Leave calm negative space for type. Show people doing, not posing: calls, whiteboards, training, reviewing numbers, or celebrating real work. One clear subject per frame.

Representation

Show the actual range of sales, virtual assistance, creative, and technology roles. Clothing and representation follow each person's own choice.

Consent and privacy

Keep written consent from each identifiable person, with the right to withdraw. Name and role belong in the caption when the person is the subject. Blur client names and patient data on every visible screen; review each shot.

Never stage credibility

No stock photographs presented as staff. No AI-generated employees. No staged handshakes, blank-screen pointing, beach laptops, or imagery suggesting easy money.

Authentic cinematic atmosphere

Future footage may feature the Founder & CEO, the real building, and the working environment. Keep the guidance concise: calm composition, readable live overlays, captions where needed, sound off by default, and a static alternative with identical essential content for reduced motion.

Icons and moving image

A consistent line system, with accessible alternatives.

Icon system

Use Lucide, under its ISC license. Use a 24px grid and 1.5px stroke at larger sizes; retain 2px at 16px. Rounded caps and joins remain as supplied. Do not mix icon sets.

Sizes and color

16px inline; 20px buttons and lists; 24px navigation; 32 to 48px feature tiles. Use text or muted text; accent-text is for active states only. One color per icon. Never rely on color alone.

Platform assets

Use each platform's official brand resources for platform glyphs. Use a standard envelope icon for email. Do not invent a WhatsApp glyph. No emoji in UI, headings, or job titles; one or two may appear in conversational replies or social captions.

Useful icon vocabulary

message-circle / conversations
briefcase / open seats
users / team
graduation-cap / training
headset / account support
palette / creative
code-xml / technology
arrow-up-right / destination
circle-check / success
info / information
triangle-alert / attention
circle-x / error

General video guidance

Start with a person or meaningful action. Caption speech and provide accessible alternatives. Social video may use burned-in captions; website controls and essential copy stay live. Keep logo clear space and readability in any watermark. Use 9:16, 4:5, or 16:9 as the destination requires; verify current platform specifications before export.

Diagrams and media

Use restrained flat diagrams only when they explain information. Their geometry and placement are not mandatory identity assets. Do not redraw the logo as a diagram. Future footage may feature the Founder & CEO, real building, and actual workplace; a detailed production chapter, storyboard, encoding budget, and scroll sequence are not approved here. Essential content must also work without motion. Inspect any watermark at actual size rather than applying a fixed opacity or percentage blindly.

08-3d-experience.md

Retired chapter: former rendered experience

Status: retired; no implementation authority. This filename is retained only to make older links safe.

The former live-rendered architecture, glass-module concept, scene sequence, logo extrusion, performance tiers, materials, camera settings, and associated handoff specifications are removed from the active system. Do not build from an older copy of this chapter.

Website layouts and designs remain pending user selection. Apply the current brand rules to the selected design later. See 00-read-first.md, 07-imagery-and-iconography.md, and 09-layout-and-interface.md.

Concise guidance for authentic footage and reduced-motion alternatives remains in Imagery and iconography. This notice does not introduce a replacement animation or video-production brief.

09-layout-and-interface.md

Layout and interface

Website layouts are pending. This chapter supplies adaptable defaults and fixed component/accessibility requirements. It does not specify a homepage, section sequence, hero composition, navigation arrangement, or application flow.

Grid and spacing defaults

Breakpoint (default)	Width	Columns	Gutter	Side margin
Phone	360-767px	4	16px	16px
Tablet	768-1023px	8	24px	32px
Laptop	1024-1439px	12	24px	48px
Desktop	1440px+	12	32px	Auto / 1280px max content

Adapt these breakpoints, columns, content width, gutters, and spacing to the selected layout and actual text. Verify narrow widths, including 360px and 375px, without unintended horizontal overflow. Do not force screen-height sections, a fixed number of light sections, or a prescribed transition after a video.

The default spacing steps are 4, 8, 12, 16, 24, 32, 48, 64, 96, and 128px. These support rhythm; they are not mandatory per-section dimensions.

Themes

Use `data-theme="deep-teal"` or `data-theme="fog"`. Select each ground for the content while preserving overall 60/30/10 emphasis. Old theme names are temporary aliases only; see MIGRATION.md. Necessary control boundaries use `line-strong`. Faint decorative lines do not define fields.

Buttons

Variant	Fill	Label	Boundary
Primary	Approved horizontal green-to-blue gradient on every theme	White, Manrope 700	Visible pale boundary on dark grounds
Secondary	Transparent	Theme text	line-strong
Tertiary / ghost	Transparent	Accessible accent-text	Underline to identify link
Disabled	Explicit neutral state	Readable muted text	Explicit boundary and nearby reason

Primary height is at least 48px with 10-12px corners. Width, stacking, and placement adapt to the selected design. Preserve label wrapping. Do not require a sticky bar or full-width mobile button unless the design calls for one. See components/Button.md for markup, states, semantics, and contrast.

Forms and status

Use visible labels, relevant helper text, high-contrast boundaries, explicit errors, and programmatic associations. Choose only necessary fields for the selected flow; the field set is not approved by a specimen. Never require age, marital status, religion, or a photograph. Errors use an icon, the word Error, and a useful correction in the theme text color. Status meaning never depends on color alone. Amber remains verified numerical achievement only.

Behavior and defaults

Shape, depth, and behavior

Restrained surfaces, visible focus, and content that works without motion.

Default shape tokens

Default radii: 2px tiny details; 6px inputs and tags; 10px cards; 20px large panels. Adapt non-CTA panel radii to the selected design. The primary CTA remains a restrained rounded rectangle with 10 to 12px corners; no pill shape.

Depth

Use approved tonal surfaces and restrained edges. White cards may sit on Fog. Select elevation and sticky behavior only when the chosen layout needs them. No neon glow, excessive shadows, or glass effects that reduce readability.

Focus and interaction

Every interactive element gets a visible 2px focus ring with 2px offset. Preserve the gap so the ring contrasts with the surrounding surface. Never hide focus or indicate it only by a fill-color change. Keep keyboard order logical and focused controls unobscured.

Motion and performance

Native scrolling; no scroll-jacking. Starting timings: 100ms for simple state changes and 200ms for menus. Adapt to the chosen interaction. Respect reduced motion. Performance targets: LCP at most 2.5s, INP at most 200ms, CLS at most 0.1 at the 75th percentile. Measure the future implementation.

Applying the system / flexible layouts

Brand consistency comes from color, type, logo, and component rules across different compositions.

When a design is selected

Preserve its intentional content structure and composition, then apply PractiScale colors, typography, logo placement rules, and approved CTA styling. A centered hero, split hero, editorial page, or card arrangement can all express the same identity.

When no design is selected

Develop design options as proposals. Use the fixed brand rules from the start. Make clear that the layout, navigation, image treatment, and interactions are awaiting selection.

60 / 30 / 10 across the experience

Keep Deep Teal as the primary environment, with calm light reading surfaces and controlled accents. This guides overall visual emphasis, not exact pixel counts, equal section heights, or a mandatory dark-light-dark sequence.

Keep component identity

The approved green-to-blue primary CTA and White label remain the same on all themes. Adapt button width and placement to the layout. Keep 48px minimum height, 10 to 12px corners, readable Manrope labels, and visible boundaries and focus.

Keep typography roles

Use Sora, Manrope, JetBrains Mono, and Noto Nastaliq Urdu for their assigned roles. Adapt display size and column width rather than shrinking mobile body copy. Keep essential content as live text.

Avoid accidental design commitments

Do not inherit the PDF cover geometry, stepped working line, sample page sequence, sample header, role cards, or application dialog as a required visual language. No full-page website mockup is approved here.

Readability / check each chosen design

The tested color pairs are reusable. Visibility must still be checked in the actual implementation.

Element	Required check	Avoid
Logo	Correct original variant; 1X clear space; full logo at least 240 CSS px; inspect symbol and descriptor at actual size.	Shrinking the descriptor; using an unapproved derivative; recoloring the symbol.
Reading text	Approved theme foreground on its stated ground; ordinary text contrast at least 4.5:1; mobile body at least 16px.	Opacity reductions; a light text token on a light surface; type shrunk to force a composition.
Primary CTA	Default gradient #0F8272 to #0B6B98; White label; minimum sampled contrast 4.71:1; visible dark-theme boundary.	Flat Growth Teal with White text (2.31:1); replacing the CTA fill by section theme.
Links and status	Accessible theme tokens; labels and icons for meaning; raised-light links use #0A6390.	Ordinary Bridge Blue text on dark surfaces; communicating errors only through color.
Imagery and motion	Check text over the actual crop and brightest relevant video frames; keyboard focus, zoom, and reduced-motion behavior.	Assuming these PDF checks certify a future layout, device, photograph, or website.

Component maturity

Button styling and logo protection rules are established. Component placement and content structure remain open. Content-specific components can be designed when a layout is selected; they do not depend on approval of an obsolete rendered experience. Validate each implemented interaction separately.

10-applications.md

Retired chapter: former applications

Status: retired; no template or layout approval. This filename remains only as a compatibility notice.

The earlier landing-page, social, packaging, welcome-kit, signage, office, and document application mockups are removed from the active brand book. Do not reuse their dimensions, compositions, sample facts, or asset placement as approved instructions.

This revision does not create a replacement Applications chapter. When a design or format is selected later, apply the fixed identity and validate its actual readability and production needs. See 00-read-first.md, 04-logo.md, 05-color.md, and 06-typography.md.

11-sources.md

Sources and validation scope

The supplied original brand files and the user's approved revisions establish brand authority. Edition 1.4 clarifies that colors, type roles, logo protection, and CTA identity are established while website layouts remain pending. A selected reference controls composition; it does not silently replace the identity.

Accessibility and implementation references

- W3C: WCAG 2.2. Text contrast 1.4.3; non-text contrast 1.4.11; visible focus 2.4.7; focus not obscured 2.4.11; target size 2.5.8.

- MDN: prefers-reduced-motion.

- web.dev: Web Vitals. Performance targets are not measured results for an unbuilt site.

Voice

- Nielsen Norman Group: The Four Dimensions of Tone of Voice.

- Mailchimp: Voice and Tone.

Assets and licenses

- Google Fonts: source repository. Sora, Manrope, JetBrains Mono, and Noto Nastaliq Urdu; bundled SIL Open Font License texts.

- Lucide: ISC icon license. Use original SVG artwork, not a mixed or invented icon set.

- Meta: WhatsApp brand resources. Use official artwork; no implied endorsement. Verify any production destination.

What was checked

The package checks cover current source consistency, internal file links, JSON/CSS generation, declared CSS variables, asset identity, fonts, documented contrast, and local component fixture behavior. PDF export is followed by page rendering and visual review. Reports identify the exact files and hashes.

No audience statistic, platform size, renderer version, or speculative technology stack is retained as a current requirement. External references are retained reading; this update does not claim a fresh audit of every external page. Sources and fixture checks do not certify a future layout, live website, company claim, printer proof, or full assistive-technology accessibility.

12-changelog.md

Changelog

Edition 1.4 / 19 October 2026

- Synchronized all 18 supplied files with the revised brand system.

- Established Deep Teal #134143 as the primary ground and semantic dark surfaces #1C5052 / #265F61.

- Replaced old proportion and light-section quotas with overall 60/30/10 emphasis.

- Established the same primary CTA gradient and White label on all themes; documented default, hover, pressed, focus, disabled, secondary, and tertiary treatments.

- Recalculated text, gradient, boundary, and focus contrast; documented failing pairings and remedies.

- Preserved original logo artwork, brand strategy, voice, and the four type families. Marked scale and layout values as adaptable defaults.

- Removed active rendered-experience and application specifications. Their filenames now contain short retirement notices so older links cannot reintroduce obsolete instructions.

- Removed unsupported company examples and outdated platform/audience assumptions. Story templates remain explicitly unverified.

- Added an AI reading guide, migration notes, local font declarations, generated CSS, component fixture, and verification evidence.

- Kept final website designs, layouts, navigation composition, imagery placement, and application flow pending user selection.

Prior directions

Earlier background values, section-dependent button fills, fixed light-section rules, rendered scenes, and application mockups are superseded. Old releases are provenance, not current implementation authority.

Still to supply

Final layout selection; original vector logo and approved derivatives; consented real photography; verified company history, roles, pay, timings, and destinations; native-speaker Urdu review. Future websites require their own validation.

components/Button.md

Button

Fixed component identity; placement is adaptable. This specification does not approve a page layout, application flow, sticky bar, or external destination.

Variants and states

Variant / state	Treatment
Primary default	Horizontal #0F8272 to #0B6B98; White label
Hover	#0D7668 to #095F87; White label
Pressed	#0B695D to #085477; White label
Focus	Default fill; visible 2px theme ring, 2px offset
Disabled	Neutral fill and readable muted label; nearby reason; native disabled behavior
Secondary	Transparent, theme text, 1.5px line-strong outline
Tertiary / ghost	Transparent, accent-text, underlined link

Use Manrope 700 at the default 15/20 label size; at least 48px height; 10-12px radius. Default radius is 11px. Gradient identity is identical on dark and light grounds. Dark boundary is #D6E6E6. No glow, pill shape, decorative shadow, or flat-teal replacement. White on raw Growth Teal is only 2.31:1 and fails ordinary-text contrast.

White-label minimum contrast across 1,001 samples: default 4.708:1, hover 5.508:1, pressed 6.570:1. This applies to the exact opaque sRGB gradient. Do not reduce label opacity or introduce overlays without rechecking.

Markup

Load `components/bundle.css` once. Use a button for an action and an anchor for navigation. Do not make a button-looking div.

```
<div class="ps" data-theme="deep-teal">
  <button class="ps-btn ps-btn--primary" type="button">Apply on WhatsApp</button>
  <a class="ps-btn ps-btn--secondary" href="#open-seats">See open seats</a>
```

```
  <a class="ps-btn ps-btn--ghost" href="#email-route">Email your CV</a>
</div>
```

The selectors, destinations, and arrangement are illustrative. A real navigation action requires a verified target. An action button needs the behavior appropriate to the selected flow; this CSS does not connect WhatsApp or transmit applications.

```
<button class="ps-btn ps-btn--primary" type="button"
        disabled aria-describedby="apply-reason">Apply on WhatsApp</button>
<p id="apply-reason">Complete the required fields to apply.</p>
```

Native disabled buttons cannot activate. `aria-disabled="true"` alone does not disable an anchor or button: the implementation must prevent mouse and keyboard activation, preserve a clear reason, and choose appropriate focus behavior. Avoid a disabled anchor when a native disabled button fits the action.

Width, icons, and accessibility

`ps-btn--block` fills the available width when the selected layout calls for it. Labels wrap; never truncate essential words. Keep button text visible and unobscured at zoom and narrow widths. An optional leading icon is 20px, decorative with aria-hidden when its label already states the action. WhatsApp uses the official platform glyph, not a substitute Lucide speech bubble. Text-only buttons are allowed; no unprovided platform artwork is fabricated.

Keyboard focus must remain visible. Reduced motion removes transitions and press scaling. Forced-color mode uses system colors for visibility. Do not style the focused state solely as a fill-color change. The fixture tests reusable styles, not the future application behavior.

components/Logo.md

Logo component

Fixed artwork and protection rules; placement is open. The demonstration tiles are not final header designs.

Use existing primary artwork on light surfaces and reversed artwork on dark surfaces. Use a mark alone only in a suitable context. Never alter the internal proportions or remove the descriptor to make a header fit.

Markup

```
<a class="ps-logo-space" href="/" aria-label="PractiScale home">
  <img class="ps-logo ps-logo--full"
       src="assets/logos/practiscale-logo-reversed.png"
       width="363" height="67" alt="PractiScale - Built for growth">
</a>
```

The asset path above is relative to a page in the design-system root. From another folder, resolve the real URL. Select the variant for the actual local background. Do not use CSS filters to simulate a variant.

Size and space

- Full logo with descriptor: at least 240 CSS px wide / 50mm print.

- Mark alone: at least 24 CSS px / 8mm print.

- Full-logo clear space is 1X, X being the wordmark cap height (approximately 7% of full width).

- Mark-only clear space is half its height. The mark-space helper uses the full symbol size conservatively.

- Helpers default to a 240px full logo and a 32px mark. Custom dimensions may increase them, not violate the minima.

- If the full logo will not fit, redesign the arrangement or use the approved mark alone in a suitable context. Do not shrink the descriptor.

The darker blue symbol has less separation on dark teal and Harbor. Inspect it at actual size; Fog/White offers clearer separation. Never use the logo on Growth Teal, Amber, the CTA gradient, or a busy photograph. Use a protected calm area for imagery.

Source and dependencies

The supplied full logos are 363 x 67px rasters and the mark is 64 x 60px. Obtain the designer's original vector master and approved derivatives for sharper production use. No official artwork has been traced, recolored, or reconstructed. See ../04-logo.md for the complete protections.

MIGRATION.md

Migration from the supplied files

This package is a replacement copy for review and installation. It does not modify the original directory automatically. Keep the fixed identity while adapting later-selected layouts.

Theme names

Canonical names are `deep-teal` and `fog`. For existing markup, `night` and `day` are temporary deprecated aliases to those new values. They no longer represent the prior palette. New work must use the canonical names. No automatic theme detection chooses a layout or changes the primary CTA identity.

Token changes

Old use	New use
Flat primary button using accent / on-accent / accent-hover	primary-start, primary-end, on-primary, primary-hover-start/end, primary-pressed-start/end
danger hue	error: high-contrast theme text plus explicit error label, icon, and correction
glow-accent	Removed; no replacement glow
link on a raised light surface	link-raised
on-proof	Deep Teal #134143 on Proof Amber
Scene heights, camera or renderer tokens	Removed; layout and media decisions remain open

The old flat-button variables are deliberately not provided as aliases. Search consumers and migrate their markup/CSS to the new component rules. Merely replacing the JSON cannot update old application logic.

CSS entry point

`components/bundle.css` loads ../fonts.css, ../tokens.css, and ../components.css in that order. It is optional convenience; alternatively load those three files directly once. No remote font import or external runtime is required for the component styles.

JSON and generation

`tokens.json` is the canonical value source, using the Edition 1.4 structure: official colors, theme roles, CTA, typography, governance, and adaptable defaults. The older color.tokens/type.groups shape is not retained as a second conflicting source. Update code that consumes the old JSON shape.

Run `python tools/build_tokens.py` to regenerate tokens.css. Then run `python tools/verify_sources.py`. Do not hand-edit generated CSS. Re-run browser fixture checks after component changes. Fixture checks cannot certify an old site that still has its own button or theme rules.

Chapter retirement

08-3d-experience.md and 10-applications.md are short notices. They preserve paths, not the old specifications. Do not restore their former content as requirements. The original PDF has not been copied into this package, so it cannot be mistaken for the current consolidated handbook.

tokens.json

Complete source listing

Exact source is in the ZIP. Blank lines are compressed and long lines wrap for readability; this listing does not approve a website composition.
